

Round 1A 2008

**A. Minimum Scalar Product**[B. Milkshakes](#)[C. Numbers](#)[Contest Analysis](#)[Questions asked](#) **3**

## Submissions

## Minimum Scalar Product

5pt	Not attempted <b>2352/2567 users</b> correct (92%)
10pt	Not attempted <b>1048/2336 users</b> correct (45%)

## Milkshakes

10pt	Not attempted <b>655/1042 users</b> correct (63%)
25pt	Not attempted <b>312/432 users</b> correct (72%)

## Numbers

15pt	Not attempted <b>577/1925 users</b> correct (30%)
35pt	Not attempted <b>96/364 users</b> correct (26%)

**Problem A. Minimum Scalar Product**

This contest is open for practice. You can try every problem as many times as you like, though we won't keep track of which problems you solve. Read the [Quick-Start Guide](#) to get started.

Small input  
5 points

Solve A-small

Large input  
10 points

Solve A-large

## Problem

You are given two vectors  $v_1=(x_1,x_2,\dots,x_n)$  and  $v_2=(y_1,y_2,\dots,y_n)$ . The scalar product of these vectors is a single number, calculated as  $x_1y_1+x_2y_2+\dots+x_ny_n$ .

Suppose you are allowed to permute the coordinates of each vector as you wish. Choose two permutations such that the scalar product of your two new vectors is the smallest possible, and output that minimum scalar product.

## Input

The first line of the input file contains integer number **T** - the number of test cases. For each test case, the first line contains integer number **n**. The next two lines contain **n** integers each, giving the coordinates of  $v_1$  and  $v_2$  respectively.

## Output

For each test case, output a line

Case #X: Y

where **X** is the test case number, starting from 1, and **Y** is the minimum scalar product of all permutations of the two given vectors.

## Limits

## Small dataset

**T** = 1000  
 $1 \leq n \leq 8$   
 $-1000 \leq x_i, y_i \leq 1000$

## Large dataset

**T** = 10  
 $100 \leq n \leq 800$   
 $-100000 \leq x_i, y_i \leq 100000$

## Sample

Input	Output
2	Case #1: -25
3	Case #2: 6
1 3 -5	
-2 4 1	
5	
1 2 3 4 5	
1 0 1 0 1
